

# **Consequences of climate change**

In the last 50 years, the trend of climate change has been greater than 100 years ago, so this has had consequences such as.

The increase in the average temperature of the earth, the increase in sea level and its temperature, danger of extinction of numerous plant and animal species, and others. The inaction of governments and large companies is the main cause of warming, according to the study, climate change is happening and is due to the socioeconomic activities of industrialized countries and now also of emerging ones.

In conclusion, it is we who are taking away our own habitat, and we continue to do nothing about it, we must stop this. **STOP!**
